

2012 **ANNUAL REPORT**

MESSAGE FROM OUR LEADERS

L to R: NKF Chairman Ed Walter, NKF President Dr. Lynda Szczech, NKF CEO Bruce Skyer

At year's end, it's only natural to look back and take stock of where we've been before we look ahead to where we're headed in the coming year. NKF began this year under very difficult circumstances due to the economic recession and loss of longstanding, ongoing revenue sources. To meet those challenges, we took a number of steps including diversifying revenue, reducing expenses and integrating local divisions into "One NKF."

And today, we are thrilled to report that all the steps we took and all the plans we made were successful by any measure. **The National Kidney Foundation had a banner year during which we generated an unrestricted surplus of \$4 million, we served more than three million patients, families and people at risk across the country and are moving forward to a bright future.**

Working collaboratively with our headquarters and field staff, national and local boards and key volunteers, NKF has developed a new strategic plan outlining priorities that are both impactful and financially sustainable. Patients and their needs continue to be the core of what NKF has done, is doing and will continue to do. We've committed to fighting the challenge of kidney disease through Awareness, Prevention and Treatment. We're working to ramp up our communications efforts so that the millions who are unaware but need to know they're at risk will have a chance to find out before it's too late.

Through our health screenings all over the country, comprehensive website and online communities, the NKF is leading the effort to prevent kidney disease. Launched this year, our PEERS mentoring program offers support and prevention strategies from experienced patients to those who are newly-diagnosed. The NKF Cares hotline, manned by trained professionals, is providing thousands each month the opportunity to learn about their condition as well as proper nutrition and healthy lifestyle choices that will help prevent kidney damage.

While continuing our longstanding tradition of excellence in education for the nephrology professional community, we're putting our resources behind education of the primary care practitioner—those who can identify, diagnose and care for people with early stage kidney disease.

This year, we organized our local offices into nine regions. Collaborative teamwork and communication are enhancing our services and bringing the best programs to our patients while we continue to develop our outreach, management and fundraising capabilities.

In order to diversify and add to our revenue base, we have created an individual and major gifts program that is enabling us to reach out to potential supporters in new ways that will benefit NKF.

This year represented a new beginning for NKF. We assessed what we do well, what's most needed and where we can have the greatest impact on the lives and health of our constituents. And NKF put a plan in place that will capitalize on our strengths and raise the revenue needed to deliver meaningful programs that reach the greatest number of people at risk for kidney disease. With the groundwork in place, we look forward to building on our successes in 2013.

PUBLIC EDUCATION

26 Million

Americans have chronic kidney disease (CKD)

Twenty-six million Americans have chronic kidney disease (CKD), and millions more are at risk, but most don't know it. CKD often develops slowly with few symptoms, and many people don't realize they're sick until the disease is advanced and requires dialysis or a transplant. But **kidney disease doesn't have to be the ninth leading cause of death in the U.S.** The NKF remains **dedicated to spreading the word about kidney disease and its risk factors, the importance of early detection and the need for organ donation.**

This year, the NKF teamed up with several celebrity spokespeople to raise kidney disease awareness. Award-winning actor, comedian and host of NBC-TV's top rated *America's Got Talent*, Nick Cannon, lifestyle maven B. Smith, and former major league baseball player David Eckstein all stepped forward.

During National Kidney Month in March, Nick Cannon told his personal kidney disease story and urged Americans to get tested on national TV, including *Good Morning America*. B. Smith participated in a Healthy Recipe Makeover Contest and free NKF screening at Grand Central Terminal in New York City, appearing on *Good Day New York* onsite. Publications from *USA Today* to *Ebony* magazine ran stories highlighting NKF's free kidney screening and awareness events. "Dear Abby" published a letter urging readers to participate in NKF's free kidney screenings across the country throughout the in her nationally syndicated advice column, which reaches over 110 million readers.

Nick Cannon Hosts the Kidney Walk

Nick Cannon continued his partnership with the NKF as host of the Kidney Walk. He appeared on national television programs such as *The View*, *Access Hollywood*, *Rachael Ray*, and *Larry King Now* to highlight kidney disease and its risk factors. David Eckstein also told his story at the Major League Baseball Fan Cave and the interview was posted on MLB.com, reaching thousands of fans.

Growing Online Communities

4.5 million

Visits to www.kidney.org

2.3 million

A to Z Health Guide page views

The NKF's comprehensive website, kidney.org includes timely articles on kidney disease prevention, the latest health news, kidney-friendly recipes, treatment options and important information on organ donation and transplantation. The [A to Z Health Guide](#) continues to be a popular feature attracting millions per month.

NKF's "[Ask the Doctor](#)" blog offers web visitors the opportunity to ask any kidney-related question and receive an answer online within 48 hours from NKF spokesperson Dr. Leslie Spry. Dr. Spry has answered more than 3,000 questions and the blog has had more than 155,000 page views. Dr. Spry also writes a monthly column about kidney health for the *Huffington Post*, which reaches millions of people nationally.

65,000

Facebook Fans

6,500

Twitter Followers

200,000

YouTube Video Views

2012 saw an increase in our online communities, utilizing social media platforms to create awareness and share information. Our Facebook fans post messages, offer advice, and share links and tools provided by the NKF. Twitter followers rely on NKF for health news, and our YouTube channel contains cooking segments, health advice, personal stories and Foundation news.

NKF distributes a monthly e-newsletter, "Love Your Kidneys," that includes health advice, new recipes and research, to 140,000 subscribers. We also publish a quarterly e-newsletter, "Keep Healthy," which focuses on risk factors for kidney disease and contains prevention tips to maintain a healthy lifestyle. It currently has more than 12,000 subscribers.

"The kidneys filter out toxins in the blood, acting as the body's purifier, but unless they stop working, people pay no attention. The fact is there are 26 million Americans with kidney disease and most don't know it. One in three people in this country are at risk because of high blood pressure and diabetes-the two leading causes. So none of us can afford to ignore this anymore. I'm working with the NKF to help get the word out about screening and the importance of healthy lifestyle in preventing kidney disease. I had very unhealthy eating habits but I now know that eating low fat, low sodium and low sugar diets and keeping blood pressure and blood sugar under control can prevent kidney damage".

— Nick Cannon, award-winning actor, comedian, and host of *America's Got Talent*

ADVOCACY

The concerns of kidney patients as well as those at risk were heard in the halls of Congress this year, due to the National Kidney Foundation's efforts. NKF requested continued support for the Chronic Kidney Disease Program at the Centers for Disease Control and Prevention (CDC), an initiative designed to provide public health strategies for promoting kidney health. And the process was set in motion. At year's end, CDC launched a web site (www.cdc.gov/ckd) providing comprehensive data on kidney disease in the U.S.

On the transplant front, NKF continued to lead the community's effort to enact legislation to extend Medicare coverage of **immunosuppressive drugs for kidney transplant recipients**. In honor of World Kidney Day in March, 20 NKF patient advocates shared their stories as they met with Congressional staff and the result was numerous cosponsors of the Immunosuppressive Drug Coverage Act. **As of November 2012, more than 120 House Representatives had cosponsored H.R. 2969 and 21 Senators were cosponsors of the companion bill, S. 1454.**

NKF joined other kidney groups on the Steering Committee of the first annual Home Dialysis Summit that brought more than 50 stakeholders together for a one-day conference to discuss opportunities and barriers to the utilization of home dialysis therapy. We continue to serve as a member of the Home Dialysis Alliance that was formed to build support for the Summit's various recommendations.

To ensure that important medications get reviewed and approved in a timely manner and that medical devices for kidney patients are safe, NKF maintains a seat on the Board of Directors of the Alliance for a Stronger FDA. The Alliance consists of nearly 200 members, including consumer, patient, and research advocacy organizations; associations representing health professions and industry; and

individual companies. Its sole focus is to **build support for additional FDA funding through the annual congressional appropriations process.**

"When you're passionate about a cause, you're always successful in your efforts. You never know who you will impact by sharing your story. As a health care professional and kidney donor for my dad, it was so important to me to be part of NKF's efforts on Capitol Hill. Sharing my story as I helped advocate for legislation to extend coverage for immunosuppressive drugs will hopefully help make a difference in the lives of kidney patients everywhere."

— Gina Ferguson, kidney donor

EARLY DETECTION

"Before KEEP, I didn't know that high blood pressure, which runs in my family, was a leading risk factor for kidney disease. I'm constantly chasing after my grandchildren, and in order to watch them grow up, I'm determined to preserve my kidney function. And so, I've made some important lifestyle changes-daily exercise and cutting back on salt, sweets and fast food. I am so grateful that the KEEP screening alerted me to the silent toll high blood pressure was taking on my kidneys and ways to prevent further damage."

— Jeff Carter, NKF kidney screening participant

The National Kidney Foundation (NKF) conducts **free, community-based kidney health screenings to reach those at the greatest risk for developing kidney disease** with the goal of detecting damage early on and preventing further loss of kidney function. In 2012, more than 15,000 people at risk for kidney disease participated in our screening programs.

Our research shows that people who participate in these programs tend to adopt healthy and life-saving behaviors as a result. For example, after participating in KEEP, people who discovered kidney disease or other life-threatening conditions, such as diabetes, high blood pressure or cardiovascular disease, were more likely to pay a visit to their doctors. Additionally, these **participants were more likely to make lifestyle changes such as regularly monitoring blood pressure and blood sugar levels, taking prescription medications and adopting healthier diets.**

Kidney Early Evaluation Program (KEEP)

NKF's KEEP screening evaluates kidney function and includes blood and urine tests as well as blood pressure and body mass index. Those screened also receive a **personalized consultation with a health care professional**, during which they can review results and discuss health concerns. KEEP screenings are held coast-to-coast and anyone with risk factors — diabetes, high blood pressure or a family history of these conditions or kidney disease-is eligible to attend.

More than
180,000
people at risk have been screened

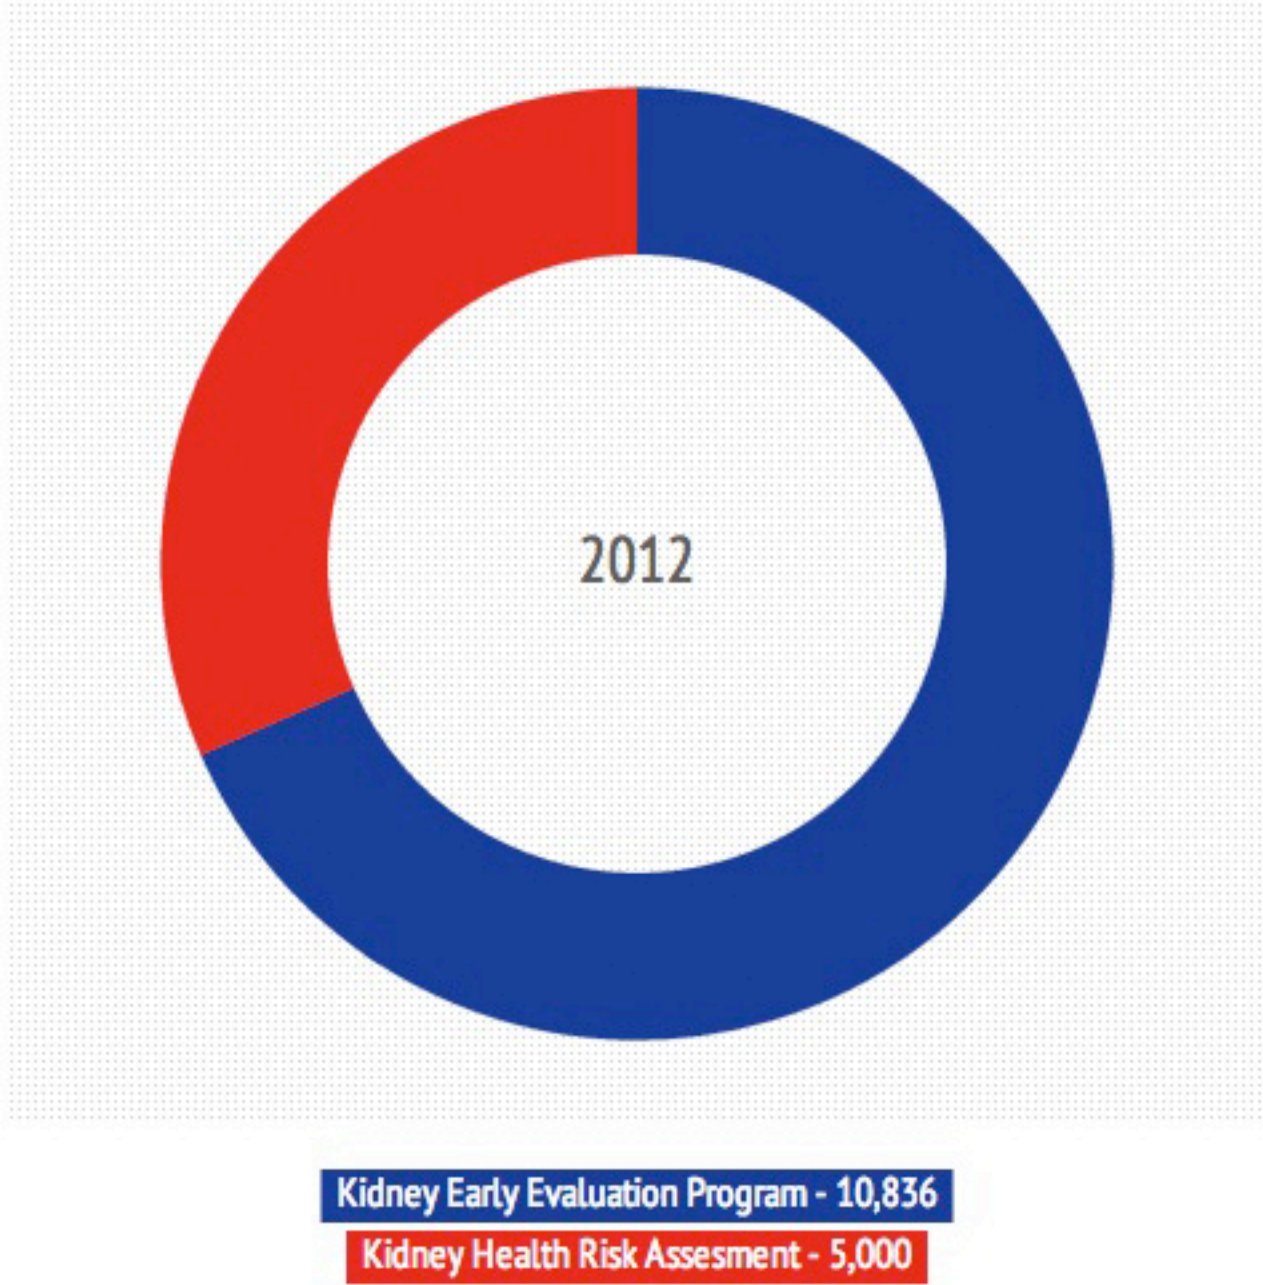

Approximately
20%
of those screened discovered they had kidney disease

Only
2%
were previously aware of their diagnosis

Kidney Health Risk Assessment (KHRA)

NKF's KHRA screening **focuses on increasing kidney health awareness while at the same time evaluating participants' risk for developing kidney disease.** This program is held in public settings, such as health fairs, trade expos, transit hubs, state capitols and other well-trafficked spaces, in order to reach a wide audience. KHRA screenings identify those at greatest risk through blood pressure and body mass index (BMI) measurements, as well as the completion of a brief questionnaire. Each at-risk attendee is also eligible to meet with an advanced health practitioner who evaluates kidney risk based on test results and health history. Those recognized as at-risk are also given educational resources, encouraged to follow up with their physicians and invited to attend the more comprehensive KEEP screening.

Total Number of People NKF Screened for Kidney Disease

PATIENT SERVICES

The kidney patient is at the core of all of NKF's programs and this year NKF expanded educational and support services for tens of thousands who are affected by kidney disease, dialysis and transplantation.

NKF Cares Help Line

Our patient support Help Line. NKF Cares is staffed by trained professionals who **help ease the path for patients on their kidney disease journey – those who have just embarked and those who have been facing this challenge for many years.** Every day, they offer information on topics such as treatment options for kidney failure and managing a kidney-friendly diet, and also offer support to those preparing for transplant and those navigating complex insurance systems. In addition to counseling patients, they provide resources, educational materials and advocacy opportunities.

NKF Cares fielded nearly
10,000
in 2012

NKF's newest educational offering for the kidney community, *Kidney Living*, **made its debut in 2012.** *Kidney Living* is a free magazine for dialysis patients that features stories of people who are living well on dialysis, tips for coping with kidney disease, healthy eating suggestions and more. More than 10,000 people have already subscribed for home delivery.

More than
400,000
issues of *Kidney Living* distributed

The NKF's **Peers Lending Support** program matches trained kidney patients with newly-diagnosed individuals. Peer mentors serve as positive role models by sharing first-hand knowledge, experience, hope and inspiration. Peer support is highly effective in helping kidney patients adjust to dialysis and in alleviating fears relating to kidney disease and transplantation. Studies have also shown that **peer programs can decrease symptoms of depression and social isolation and improve self-esteem.**

"I had just been diagnosed with CKD stage 3,

NKF Impact Around the Country

	West	Midwest	Southwest	Southeast	Northeast (incl. DC)
People screened	2,166	2,851	1,295	4,002	2,882

CME Participants	6,744	14,864	8,988	22,798	13,971

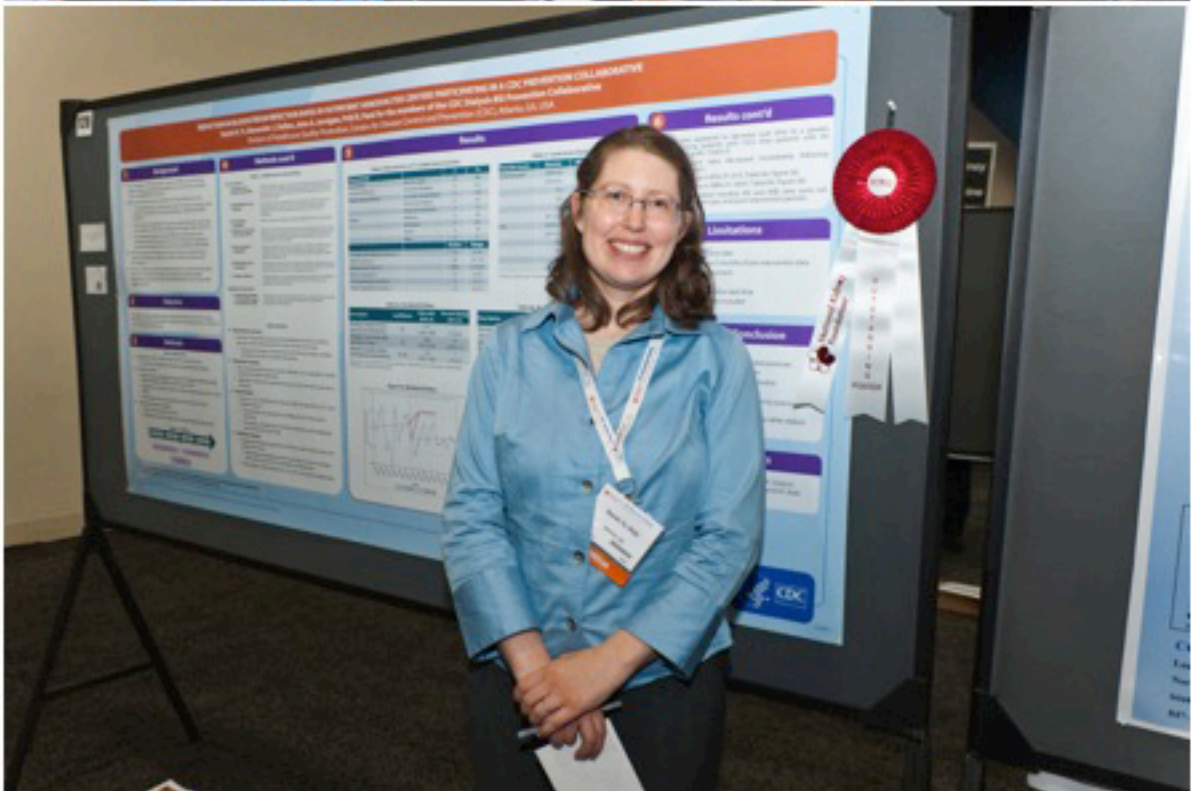

PROFESSIONAL EDUCATION

This year, NKF offered an array of new educational opportunities for healthcare professionals to learn about the latest advancements in the detection and treatment of kidney disease.

The NKF has earned **Accreditation with Commendation from the Accreditation Council** for Continuing Medical Education (ACCME). This achievement grants the NKF a 6-year accreditation term and places the foundation in the highest tier of all Continuing Medical Education (CME) providers, including the nation's most prestigious medical schools and professional medical societies.

NKF Spring Clinical Meetings

The premier NKF CME offering is the annual NKF Spring Clinical Meetings, which once again **provided an opportunity for busy healthcare providers to learn new developments related to all aspects of nephrology**. As part of NKF's initiative to reach Primary Care Providers, the Meetings marked the launch of a PCP-specific half-day symposium.

"The meeting was a great opportunity to discuss our findings with a variety of healthcare professionals and patients in the ESRD community and beyond – the range of perspectives was great."

— Sarah Yi, PhD; SCM12 Poster Presentation Award Winner

3,000
at NKF Spring Clinical Meetings

360
Research posters presented

CME/CE

Additionally, NKF offered CME/CE courses, **reaching healthcare professionals around the world, across all disciplines**. This year, NKF introduced the "Virtual Patient" and "confidence based learning" methodologies for CME/CE programs which enable the learner to self-assess their knowledge and skills in a "safe" setting, practice clinical decision-making specific to complex patients similar to what they would see in actual practice, learn where their assumptions and practices may not be aligned with guidelines and best practice, and overcome barriers to changing practice in developing the most effective clinical action/treatment plan for a patient.

NKF offered
95
CME/CE courses

NKF CME/CE reached more than
81,000
healthcare professionals around the world, across all disciplines

Mobile Apps

NKF also launched three new smartphone medical apps, Glomerular Filtration Rate (GFR) calculator and screening/treatment algorithms for albuminuria and cardiovascular disease, to **help healthcare professionals overcome the barriers associated with lack of knowledge and/or time to research appropriate assessment algorithms or treatment options**; this information can now be referenced easily in the clinical setting.

14,000

Peer-reviewed Journals

NKF's well-respected, **peer-reviewed journals**, *American Journal of Kidney Diseases (AJKD)*, *Advances in Chronic Kidney Disease (ACKD)*, *Journal of Renal Nutrition (JRN)*, and *Journal of Nephrology Social Work (JNSW)*, **provided the latest findings and research related to kidney disease**.

Reached close to

350,000
web visitors per year

RESEARCH

The National Kidney Foundation's research activities are **helping advance knowledge about chronic kidney disease, treatment and patient outcomes**. NKF's three major initiatives include: the Kidney Early Evaluation Program (KEEP), the Awareness, Detection and Drug Therapy in Type 2 Diabetes Mellitus and Chronic Kidney Disease Study (ADD-CKD) and the Chronic Kidney Disease Prognosis Consortium.

KEEP

NKF's signature early detection screening program, the Kidney Early Evaluation Program (KEEP®), offers **free screenings** in cities around the country to anyone at risk for kidney disease--those with high blood pressure, diabetes or a family history of kidney disease. It is the nation's largest and most successful chronic disease screening program and has touched the lives of nearly a quarter of a million Americans since its inception. KEEP screens kidney function through a variety of tests, including blood, blood pressure and urine.

Everyone screened is entered into the KEEP database of over 180,000 at- risk individuals and test results are studied and analyzed to help doctors find ways to improve outcomes and better treat kidney disease in specific populations.

"KEEP has contributed greatly to the advancement of our knowledge concerning chronic kidney disease among Americans. Since the methods of KEEP touch obesity, diabetes, hypertension, kidney, and heart disease, this program is improving the health and awareness of individuals at risk for these common medical problems."

— Dr. Peter McCullough, Chairman of the KEEP Steering Committee

KEEP is studying the medical samples of participants to search for markers of chronic diseases that will ultimately lead to the development of new tests and therapies for kidney disease. KEEP is also linking its data with other national databases such as the United States Renal Data System (USRDS) to allow for more research on how best to provide care for individuals with kidney disease.

First-Ever NKF Cross-Sectional Study

Diabetes is the leading cause of kidney disease, yet recent studies have found that **only half of primary care doctors discuss chronic kidney disease with their diabetic patients**. In an effort to estimate the prevalence of chronic kidney disease in adults with type 2 diabetes and examine their care, the National Kidney Foundation launched a multi-site cross-sectional study, *Awareness, Detection and Drug Therapy in Type 2 Diabetes Mellitus and Chronic Kidney Disease* (ADD-CKD). This research

is assessing how chronic kidney disease is being identified and managed in type II diabetic patients, in the primary care setting, using a survey of 10,000 adult patients and their 500 primary care physicians. Results are showing that only 12% of diabetics with kidney disease are being identified by their primary care doctors.

"Primary care physicians are the first line of defense against one of the world's top killers. The goal of this study is to increase the awareness and management of chronic kidney disease in diabetic patients and NKF will work very closely with this group to spread the word".

— Lynda Szczech, MD, MSCE, President of the National Kidney Foundation

World's Largest Kidney Disease Dataset

Using the contributions of leading investigators from 45 studies, this NKF-funded project is creating and analyzing the world's largest dataset about patient outcomes at all stages of chronic kidney disease.

"Chronic kidney disease is a spectrum disease and at each stage, people experience different complications — from stroke and hypertension to infections and acute kidney disease. This research will examine how these complications impact a patient's prognosis at each stage."

— Dr. Josef Coresh of Johns Hopkins University, one of the project's leaders.

EVENTS

Kidney Walks

Kidney Walks are held coast-to-coast year-round to raise funds and awareness about kidney disease and the vital need for organ donors. Communities rally together to take lifesaving steps on behalf of the 26 million Americans living with kidney disease.

594,000
Americans receiving treatment

Galas & Special Events

Signature galas and events are hosted by NKF across the country throughout the year. Whether it's a night of dinner, dancing and special guests at a black-tie Kidney Ball, a sampling of culinary specialties whipped up by premier chefs at a Great Chefs gala or a Casino Night, Chili Cook-Off or Cadillac Golf Classic Tournament, the goal is the same. Funds raised through NKF events support ongoing initiatives in awareness, prevention and treatment for the tens of millions affected by kidney disease.
